

GENERAL

1.
- The contractor is responsible for verifying all site dimensions, conditions, and existing services prior to starting work. Any discrepancies must be reported to the designer immediately.
2.
- Do not scale drawings. Use written dimensions only. Confirm any missing or unclear information with the design team before proceeding.
3.
- Contractor is responsible for understanding all project drawings, specifications, and contract documents. Report any conflicts among documents prior to construction.
4.
- All work shall comply with applicable municipal, provincial, and national building codes, as well as current safety regulations.
5.
- The contractor must ensure all necessary permits and approvals are secured prior to commencing work, unless otherwise noted.
6.
- Contractor is solely responsible for job site safety, including implementing safety protocols and protecting workers, equipment, and the building from damage.
7.
- The contractor must review and coordinate shop drawings, including layouts, loads, deflection data, and dimensions, with other trades before fabrication or construction.
8.
- All rough openings for doors, windows, and equipment must be verified on-site with suppliers before framing. Coordinate framing dimensions with architectural and supplier requirements.
9.
- Coordinate appliance and equipment sizes before fabricating any built-in elements, such as millwork or cabinetry.
10.
- Ensure all new surfaces are properly prepared to receive specified finishes. Match finishes to existing conditions as required.
11.
- Contractor shall confirm structural layout and site elevations and report any conflicts or irregularities before continuing work.
12.
- All exposed structural steel, fasteners, lintels, and other metal items must be galvanized or coated for corrosion resistance, unless noted otherwise.
13.
- Seal all joints, gaps, and penetrations at ducts, beams, and piping in exposed areas to ensure airtightness and maintain fire separation where applicable.
14.
- Only tested and certified firestop systems are to be used for any penetrations through rated assemblies. Canadian-listed firestopping materials are required.
15.
- Provide appropriate separation between dissimilar materials (e.g., steel and aluminum) using approved protective coatings or isolators to avoid galvanic corrosion.
16.
- Contractor is responsible for utility connections and for ensuring that all systems (power, water, data, gas, etc.) are fully operational at turnover.
17.
- Contractors and subcontractors are required to review all documentation and coordinate their work to avoid conflicts. Any unclear instructions must be clarified with the designer.
18.
- Protect completed work from dust, damage, and moisture during the construction process. Clean and repair any damage before handover.
19.
- Use only VOC-compliant materials and coatings. Avoid paints containing lead or mercury. Prioritize low-emission materials for indoor applications.
20.
- All lumber in contact with the ground or exposed to weather must be pressure-treated and compliant with preservation standards.
21.
- Where concrete is exposed in finished areas, provide a Class 'A' smooth finish as specified.
22.
- Install fire-rated and acoustically sealed barriers at all required partitions. All rated assemblies must be sealed at joints and penetrations as per code.
23.
- Backing and supports shall be installed in walls for items such as wall-hung cabinets, vanities, handrails, plumbing fixtures, and similar.
24.
- Do not reproduce, reuse, or modify these drawings without written authorization. These documents remain the intellectual property of INHABIT and are intended solely for the project noted.
25.
- Dimensions are typically taken from face of structural components (CMU, framing, concrete, etc.) unless otherwise indicated.
26.
- Final installation of doors, windows, and mechanical/electrical components must be verified with shop drawings and manufacturer requirements before installation.
27.
- All materials and workmanship shall follow best industry practices, manufacturers' specifications, and warranty requirements.
